

CHERITON BISHOP PRIMARY SCHOOL:

Number & Calculation policy: Years 1&2

Rationale

It is our intent to enable KS1 children to develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction. Children develop an awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division. They learn how multiplication and division can be related to repeated addition and repeated subtraction.

Key Vocabulary:

whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

Years 1&2

	Concrete	Pictorial	Abstract										
Place value	By Y2 children will be taught:												
Understanding 10s and 1s	Understanding teen numbers as a complete 10 and some more Complete a group of 10 objects and count more.  13 is 10 and 3 more.	Understanding teen numbers as a complete 10 and some more Use a ten frame to support understanding of a complete 10 for teen numbers.  13 is 10 and 3 more.	Understanding teen numbers as a complete 10 and some more. 1 ten and 3 ones equal 13. $10 + 3 = 13$										
Understanding 10s and 1s	Group objects into 10s and 1s.  Bead strings to understand 	Understand 10s and 1s equipment, and link with visual representations on ten frames.  	Represent numbers on a place value grid, using equipment or numerals. <table border="1" data-bbox="1541 812 1852 1045"><thead><tr><th>Tens</th><th>Ones</th></tr></thead><tbody><tr><td></td><td></td></tr><tr><td>3</td><td>2</td></tr></tbody></table> <table border="1" data-bbox="1541 1053 1852 1141"><thead><tr><th>Tens</th><th>Ones</th></tr></thead><tbody><tr><td>4</td><td>3</td></tr></tbody></table>	Tens	Ones			3	2	Tens	Ones	4	3
Tens	Ones												
													
3	2												
Tens	Ones												
4	3												
Adding 10s	Use known bonds and unitising to add 10s.  I know that $4 + 3 = 7$. So, I know that 4 tens add 3 tens is 7	Use known bonds and unitising to add 10s.   I know that $4 + 3 = 7$.	Use known bonds and unitising to add 10s.  $4 + 3 = \square$ $4 + 3 = 7$ 4 tens + 3 tens = 7 tens $40 + 30 = 70$										

	tens.	So, I know that 4 tens add 3 tens is 7 tens.	
Addition	All children will be taught:		
	Concrete	Pictorial	Abstract
Counting and adding more	Children add one more person or object to a group to find one more. Language: the number after, one more than Use of number line and dice 	Children add one more cube or counter to a group to represent one more. Numicon supports this area.  One more than 4 is 5.	Use a number line to understand how to link counting on with finding one more.  One more than 6 is 7. 7 is one more than 6. Learn to link counting on with adding more than one.  $5 + 3 = 8$
Understanding part-part-whole relationship	Sort people and objects into parts and understand the relationship with the whole.  The parts are 2 and 4. The whole is 6.	Children draw to represent the parts and understand the relationship with the whole.  The parts are 1 and 5. The whole is 6.	Use a part-whole model to represent the numbers.  $6 + 4 = 10$ $6 + 4 = 10$
Knowing and finding number bonds within	Break apart a group and put back together to find and form number bonds.	Use five and ten frames to represent key number bonds.	Use a part-whole model alongside other representations to find number bonds. Make sure to include examples where one of the

10	$7 + 3 = 10$  7+3	 $5 = 4 + 1$	parts is zero. a)  b)  $4 + 0 = 4$ $3 + 1 = 4$
Adding by counting on	Children use knowledge of counting to 20 to find a total by counting on using people or objects. 	Children use counters to support and represent their counting on strategy. 	Children use number lines or number tracks to support their counting on strategy.  $7 + 5 = \square$
Adding the 1s	Children use bead strings to recognise how to add the 1s to find the total efficiently.  $2 + 3 = 5$ $12 + 3 = 15$	calculations using ten frames to add a teen and 1s.  $2 + 3 = 5$ $12 + 3 = 15$	Children recognise that a teen is made from a 10 and some 1s and use their knowledge of addition within 10 to work efficiently. $3 + 5 = 8$ So, $13 + 5 = 18$
Bridging the 10 using number bonds	Children use a bead string to complete a 10 and understand how this relates to the addition. 	Children use counters to complete a ten frame and understand how they can add using knowledge of number bonds to 10.	Use a number line to support the calculation.  9 10 11 12 13

	7 add 3 makes 10. So, 7 add 5 is 10 and 2 more.		$9 + 4 = 13$																				
Adding a 1-digit number to a 2-digit number not bridging a 10	Add the 1s to find the total. Use known bonds within 10.  41 is 4 tens and 1 one. 41 add 6 ones is 4 tens and 7 ones. This can also be done in a place value grid. <table border="1" data-bbox="333 868 602 1147"><tr><th>T</th><th>O</th></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr></table>	T	O					Add the 1s.  34 is 3 tens and 4 ones. 4 ones and 5 ones are 9 ones. The total is 3 tens and 9 ones. <table border="1" data-bbox="882 772 1162 1059"><tr><th>T</th><th>O</th></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr></table>	T	O					Add the 1s. Understand the link between counting on and using known number facts. Children should be encouraged to use known number bonds to improve efficiency and accuracy.  This can be represented horizontally or vertically. $34 + 5 = 39$ or <table border="1" data-bbox="1532 1011 1711 1235"><tr><th>T</th><th>O</th></tr><tr><td>3</td><td>4</td></tr><tr><td>+</td><td>5</td></tr><tr><td></td><td>9</td></tr></table>	T	O	3	4	+	5		9

Adding a 1-digit number to a 2-digit number	Complete a 10 using number bonds.	Complete a 10 using number bonds.																					

bridging 10		 $7 = 5 + 2$ $45 + 5 + 2 = 52$
Adding a 1-digit number to a 2-digit number using exchange	Exchange 10 ones for 1 ten. 	Exchange 10 ones for 1 ten. 
Adding a multiple of 10 to a 2-digit number	Add the 10s and then recombine.  66 is 6 tens and 6 ones. $66 + 10 = 76$	Add the 10s and then recombine. $37 + 20 = ?$ $30 + 20 = 50$ $50 + 7 = 57$ $37 + 20 = 57$

Adding a multiple of 10 to a 2-digit number using columns	Add the 10s using base 10 and a place value grid to support. <table><tr><th>T</th><th>O</th></tr><tr><td></td><td></td></tr><tr><td></td><td></td></tr></table> 16 is 1 ten and 6 ones. 30 is 3 tens. There are 4 tens and 6 ones in total.		T	O					Add the 10s represented vertically. Children must understand how the method relates to unitising of 10s and place value. <table><tr><th>T</th><th>O</th></tr><tr><td>1</td><td>6</td></tr><tr><td colspan="2"> </td></tr><tr><td>+ 3</td><td>0</td></tr><tr><td colspan="2"> </td></tr><tr><td>4</td><td>6</td></tr></table> $1 + 3 = 4$ $1 \text{ ten} + 3 \text{ tens} = 4 \text{ tens}$ $16 + 30 = 46$	T	O	1	6			+ 3	0			4	6
T	O																				
																					
																					
T	O																				
1	6																				
+ 3	0																				
4	6																				
Adding two 2-digit numbers	Add the 10s and 1s separately.  $5 + 3 = 8$ There are 8 ones in total. $3 + 2 = 5$ (3 tens + 2 tens) There are 5 tens in total. $35 + 23 = 58$	Add the 10s and 1s separately. Use a part-whole model to support. Use place value achart and base 10 to support $11 = 10 + 1$ $32 + 10 = 42$ $42 + 1 = 43$ $32 + 11 = 43$	Add the 10s and the 1s separately, bridging 10s where required. A number line can support the calculations.  $17 + 25$																		
Adding two 2-digit numbers using a place value grid	Add the 1s. Then add the 10s.		Add the 1s. Then add the 10s.																		

	Tens Ones 32 14 6 Tens Ones 32 14 46		
Subtraction	All children will be taught:		
	Concrete	Pictorial	Abstract
Counting back and taking away	Children arrange objects and remove to find how many are left.  1 less than 6 is 5. 6 subtract 1 is 5.	Children draw and cross out or use counters to represent objects from a problem.   9 - = There are children left.	Children count back to take away and use a number line or number track to support the method.  9 - 3 = 6
Finding a missing part, given a whole and a part	Children separate a whole into parts and understand how one part can be found by subtraction.	Children represent a whole and a part and understand how to find the missing part by subtraction.	Children use a part-whole model to support the subtraction to find a missing part.  7 - 3 = ? Children develop an understanding of the

	 $8 - 5 = ?$	 $5 - 4 =$	relationship between addition and subtraction facts in a part-whole model.  $\square - \square = \square$ $\square - \square = \square$ $\square + \square = \square$ $\square + \square = \square$ If I know this what else do I know?
Finding the difference	Arrange two groups so that the difference between the groups can be worked out.  <i>8 is 2 more than 6.</i> <i>6 is 2 less than 8.</i> <i>The difference between 8 and 6 is 2.</i>	Represent objects using sketches or counters to support finding the difference.  $5 - 4 = 1$ <i>The difference between 5 and 4 is 1.</i>	Children understand 'find the difference' as subtraction.  $10 - 4 = 6$ <i>The difference between 10 and 6 is 4.</i>
Subtraction within 20	Understand when and how to subtract 1s efficiently. Use a bead string to subtract 1s efficiently.  $5 - 3 = 2$ $15 - 3 = 12$	Understand when and how to subtract 1s efficiently.  $5 - 3 = 2$ $15 - 3 = 12$	Understand how to use knowledge of bonds within 10 to subtract efficiently. $5 - 3 = 2$ $15 - 3 = 12$
Subtracting 10s and 1s	For example: $18 - 12$ Subtract 12 by first subtracting the 10, then the remaining 2.	For example: $18 - 12$ Use ten frames to represent the efficient method of subtracting 12.	Use a part-whole model to support the calculation. $19 - 14$

	 First subtract the 10, then take away 2.	 First subtract the 10, then subtract 2.	$19 - 10 = 9$ $9 - 4 = 5$ So, $19 - 14 = 5$
Subtraction bridging 10 using number bonds	For example: $12 - 7$ Arrange objects into a 10 and some 1s, then decide on how to split the 7 into parts.  7 is 2 and 5, so I take away the 2 and then the 5.	Represent the use of bonds using ten frames.  For $13 - 5$, I take away 3 to make 10, then take away 2 to make 8.	Use a number line and a part-whole model to support the method. $13 - 5$ 
Subtracting multiples of 10	Use known number bonds and unitising to subtract multiples of 10.  8 subtract 6 is 2. So, 8 tens subtract 6 tens is 2 tens.	Use known number bonds and unitising to subtract multiples of 10.  $10 - 3 = 7$ So, 10 tens subtract 3 tens is 7 tens.	Use known number bonds and unitising to subtract multiples of 10.  If I know that $7 - 5 = 2$ then I know that $70 - 50 = 20$
Subtracting a single-digit number	Subtract the 1s. This may be done in or out of a place value grid. 	Subtract the 1s. This may be done in or out of a place value grid. 	Subtract the 1s. Understand the link between counting back and subtracting the 1s using known bonds. 

	<table><tr><th>T</th><th>O</th></tr><tr><td></td><td></td></tr></table> 39-3= 36	T	O			<table><tr><th>T</th><th>O</th></tr><tr><td></td><td></td></tr></table>	T	O			<table><tr><th>T</th><th>O</th></tr><tr><td>3</td><td>9</td></tr><tr><td>-</td><td>3</td></tr><tr><td>3</td><td>6</td></tr></table> $9 - 3 = 6$ $39 - 3 = 36$	T	O	3	9	-	3	3	6

Multiplication	All children will be taught																														
	Concrete	Pictorial	Abstract																												
Recognising and making equal groups	Children arrange objects in equal and unequal groups and understand how to recognise whether they are equal. A B C	Children draw and represent equal and unequal groups. A B	Three equal groups of 4. Four equal groups of 3.																												
Equal groups and repeated addition Finding the total of equal groups by counting in 2s, 5s and 10s	Recognise equal groups and write as repeated addition and as multiplication. 3 groups of 5 chairs 15 chairs altogether	Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication. 3 groups of 5 15 in total Counting in 2s, 5s and 10s	Use a number line and write as repeated addition and as multiplication. $5 + 5 + 5 = 15$ $3 \times 5 = 15$																												

Using arrays to represent multiplication and support understanding	Understand the relationship between arrays, multiplication and repeated addition.  4 groups of 5	Understand the relationship between arrays, multiplication and repeated addition.  4 groups of 5 ... 5 groups of 5	Understand the relationship between arrays, multiplication and repeated addition.  $5 \times 5 = 25$
Understanding commutativity	Use arrays to visualise commutativity.  <i>I can see 6 groups of 3. I can see 3 groups of 6.</i>	Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication.  <i>This is 2 groups of 6 and also 6 groups of 2.</i>	Use arrays to visualise commutativity.  $4 + 4 + 4 + 4 + 4 = 20$ $5 + 5 + 5 + 5 = 20$ $4 \times 5 = 20$ and $5 \times 4 = 20$
Learning $\times 2$, $\times 5$ and $\times 10$ table facts	Develop an understanding of how to unitise groups of 2, 5 and 10 and learn corresponding times-table facts.	Understand how to relate counting in unitised groups and repeated addition with knowing key times-table facts.	Understand how the times-tables increase and contain patterns.  $1 \times 10 =$ $2 \times 10 =$ $3 \times 10 =$ $4 \times 10 =$ $5 \times 10 =$ $6 \times 10 =$ $7 \times 10 =$ $8 \times 10 =$ $9 \times 10 =$ $10 \times 10 =$ $11 \times 10 =$ $12 \times 10 =$

	 3 groups of 10 ... 10, 20, 30 $3 \times 10 = 30$	 $10 + 10 + 10 = 30$ $3 \times 10 = 30$	$5 \times 10 = 50$ $6 \times 10 = 60$
Division	All children will be taught		
	Concrete	Concrete	Concrete
Sharing	Share a set of objects into equal parts and work out how many are in each part. 	Sketch or draw to represent sharing into equal parts/groups. 	10 shared into 2 equal groups gives 5 in each group.
Sharing & Grouping equally	Start with a whole and share into equal parts, one at a time.  12 shared equally between 2.	Represent the objects shared into equal parts using a bar model.  20 shared into 5 equal parts. There are 4 in each part.	Use a bar model to support understanding of the division.  $18 \div 2 = 9$

	<i>They get 6 each.</i> Understand how to make equal groups from a whole.  <i>8 divided into 4 equal groups. There are 2 in each group.</i>	Understand the relationship between grouping and the division statements. $12 \div 3 = 4$  $12 \div 4 = 3$  $12 \div 6 = 2$  $12 \div 2 = 6$ 	Understand how to relate division by grouping to repeated subtraction.  There are 4 groups now. <i>12 divided into groups of 3. $12 \div 3 = 4$</i> <i>There are 4 groups.</i>
Using known times-tables to solve divisions	Understand the relationship between multiplication facts and division.  <i>4 groups of 5 cars is 20 cars in total. 20 divided by 4 is 5.</i>	Link equal grouping with repeated subtraction and known times-table facts to support division.  <i>40 divided by 4 is 10.</i> Use a bar model to support understanding of the link between times-table knowledge and division. 	Relate times-table knowledge directly to division. $1 \times 10 = 10$ $2 \times 10 = 20$ $3 \times 10 = 30$ $4 \times 10 = 40$ $5 \times 10 = 50$ $6 \times 10 = 60$ $7 \times 10 = 70$ $8 \times 10 = 80$ I used the 10 times-table to help me. $3 \times 10 = 30$. <i>I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3.</i> $3 \times 10 = 30$ so $30 \div 10 = 3$
